SUMMARY

Software Engineer with 5 years of experience designing and developing distributed backend systems and full-stack solutions for large-scale financial data platforms. Strong background in Java, Spring Boot, Python, SQL, Kafka, and ETL pipelines, with hands-on experience deploying containerized microservices using Docker, Kubernetes, and AWS. Adept at building reliable, scalable systems in Agile environments.

EDUCATION

M.S, Computer Science

University of Wisconsin - Milwaukee

Sept 2023 – May 2025

GPA: 3.7/4.0

B.Tech., Electronics & Communication Engineering

Cochin University of Science and Technology

Aug 2014 – Aug 2018

GPA: 7.2/10.0

TECHNICAL SKILLS

Programming Languages: Java, SQL, Python, C++, XSLT, HTML5, CSS3, JavaScript, Angular, React.js

Frameworks & Libraries: Spring Boot, Python Flask, FastAPI, JUnit, Mockito

Cloud & DevOps: AWS (EC2, S3, Lambda, ECS, EKS, CloudWatch), Kafka, Jenkins, GitHub, Docker, Kubernetes

Database & Tools: AWS (Redshift, S3), Oracle, Snowflake, Hibernate, SQL Server, MySQL, MongoDB, JIRA, Postman, Eclipse, Copilot, SOAP UI, Guidewire, Informatica, Cursor, PyCharm, PyTorch, Linux, PowerBI, Microstrategy

Software Engineering Foundations: Microservices, RESTful API, Multithreading, CI/CD, Agile, ETL

AI/ML: Transformer Models, NLP, LangGraph, RAG Architecture, Prompt Engineering

EXPERIENCE

Software Engineer: Cognizant Technology Solutions

February 2019 – August 2023

- Designed and developed thread-safe, scalable APIs using Java/Spring Boot in a multi-threaded Global Financials application, transforming XML financial data into normalized JSON using Python ETL scripts, reduced data normalization time by 40% and enabled real-time decision-making for global clients.
- Built and tested RESTful backend APIs integrated with Kafka producers/consumers for event-driven data processing and inter-service communication. Connected APIs with AWS services such as RDS, S3, EC2/Batch, and SQS for cloud-based ingestion pipelines, and validated integrations using Postman and SOAP UI.
- Accelerated deployment cycles by 50% by implementing DevOps CI/CD pipelines with Jenkins, Docker, and container orchestration using AWS ECS and Kubernetes, ensuring reliable, automated delivery of microservices across multiple environments. Reduced Mean Time to Resolution (MTTR) by 30% by configuring AWS CloudWatch dashboards and SNS automated alerts, enabling proactive issue detection.
- Optimized database performance by refactoring SQL stored procedures, improving query speed by 45%, and developed Angular dashboards that enhanced stakeholder decision-making capabilities. Applied Agile Scrum practices like daily stand-ups, sprint planning for collaboration and timely delivery.
- Enhanced code quality and security by achieving 85%+ JUnit test coverage and integrating SonarQube analysis, resulting in a 25% reduction in production defects and security vulnerabilities. **(client: Dun & Bradstreet)**

Full Stack Developer: Saayam For All

August 2025 – Present

- Engineered dynamic, responsive user interfaces using React.js and JavaScript, seamlessly integrating with Java-based REST APIs to facilitate efficient data exchange and real-time state management.
- Architected a multi-agent and RAG system using LangGraph, GPT-4o, and Pinecone to automate volunteer matching, cutting triage time by 75% and support tickets by 30%.

ACADEMIC PROJECTS

Top-k Sorting Under Partial Order Information: Developed a Top-k sorting algorithm using DAG optimization and AI tools like Cursor, leveraging LLM-based inference to reduce expert involvement to improve ranking accuracy by 60%.

Emotion Recognition System: Built EmotionNet, a machine learning-based CNN model implemented in Python, capable of real-time facial emotion detection and deployed through a Flask web interface for seamless interaction.
